

Table 1: Numerical recovery on fully observable NeuronBench. Each row contains 25 fits: five held-out neuron worlds and five random seeds per world. Runtime is reported only over correct (exact or near-exact) fits.

Method	Exact	Near exact	Failed	Time for correct solutions (s)
PySR	0 (0%)	8 (32%)	17 (68%)	53.3 [49.8, 56.5]
Evolved PySR (top-1; uninformative prompt; no execution feedback)	23 (92%)	2 (8%)	0 (0%)	159.5 [142.9, 233.6]

Exact: $\text{NRMSE} \leq 10^{-6}$; near exact: $10^{-6} < \text{NRMSE} \leq 10^{-3}$. Time is median [IQR] wall-clock seconds over exact and near-exact fits.
