

The 14 SR candidates: 5 → 9 → 11 solved

62 problems

30 originally solved

32 unsolved → 18 excluded from SR + 14 candidates

- 30 originally solved
- 18 excluded from SR
- 5 solved by base PySR
- +4 added by SRBench bundle
- +2 added by MIPS evolution
- 3 remain unsolved

5 → 9 → 11

Cumulative solves among 14 candidates

Inner: solved / unsolved Middle: SR suitability Outer: first method to solve

Solved = all components exact in at least one of 10 seeds. Sets are verified to be nested.
1M evaluations / 500 s per fit. New solves use transition-table checks; full-program validation is separate.
