

Recovery improves at both problem and subtask level

62 problems

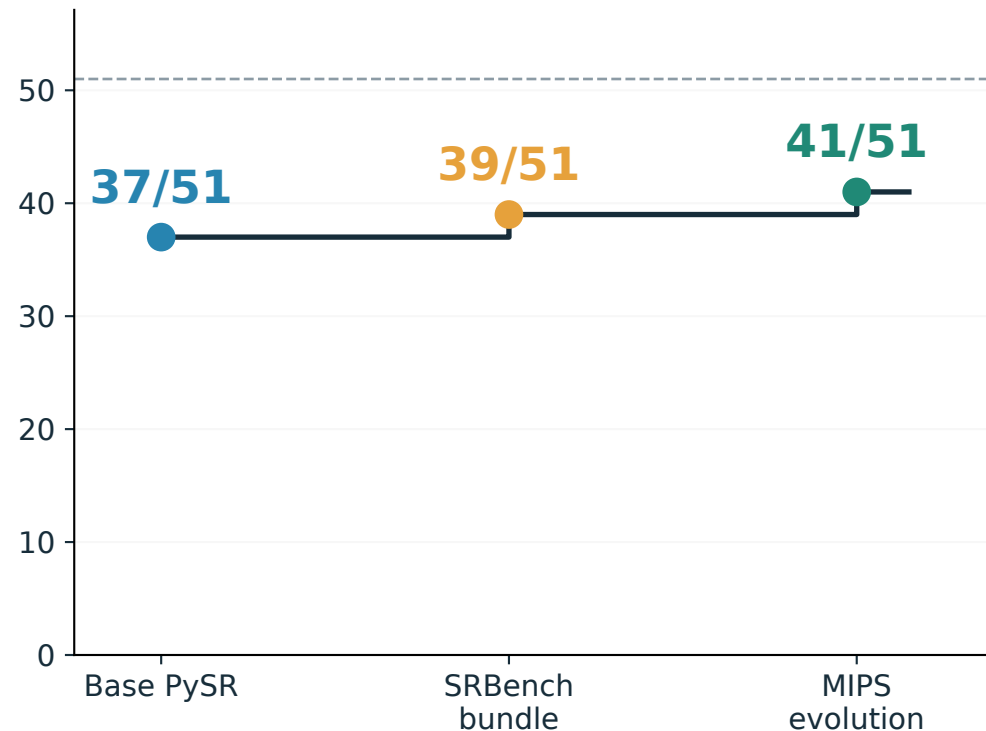

30 originally solved

32 unsolved → 18 excluded from SR + 14 candidates

Previously unsolved overall problems

Distinct SR subtasks (entire evaluation split)

Subtasks: solved at least once in 10 seeds; 51 distinct subtasks × 10 seeds = 510 fits per method.

Solved = all components exact in at least one of 10 seeds. Sets are verified to be nested.

1M evaluations / 500 s per fit. New solves use transition-table checks; full-program validation is separate.
